### Overview of the Crew Launch Vehicle Upper Stage Joan Funk Presented to the Materials and Structures for Extreme Environments meeting of the Constellation University Institutes Project

The overview begins with the bold vision for space exploration set out by President Bush in 2004. A brief description of the proposed systems architecture is presented along with an animation showing the various stages and phases of a mission. The overview concludes with latest roadmaps for the Upper Stage.

# A Bold Vision for Space Exploration

- Complete the International Space Station
- Safely fly the Space Shuttle until 2010
- Develop and fly the Crew Exploration Vehicle no later than 2014 (goal of 2012)
- ▶ Return to the Moon no later than 2020
- Extend human presence across the solar system and beyond
- Implement a sustained and affordable human and robotic program
- Develop supporting innovative technologies, knowledge, and infrastructures
- Promote international and commercial participation in exploration

"It is time for America to take the next steps.

Today I announce a new plan to explore space and extend a human presence across our solar system. We will begin the effort quickly, using existing programs and personnel. We'll make steady progress – one mission, one voyage, one landing at a time"

President George W. Bush – January 14, 2004

### the 1st Step to Mars and Beyond.... The Moon -

## Gaining significant experience in operating away from Earth's environment

- Space will no longer be a destination visited briefly and tentatively
- "Living off the land"
- Human support systems

- Crew and cargo launch vehicles (125 metric ton class)
- Earth ascent/entry system Crew Exploration Vehicle
- Mars ascent and descent propulsion systems (liquid oxygen / liquid methane)

## Conduct fundamental science

 Astronomy, physics, astrobiology, historical geology, exobiology

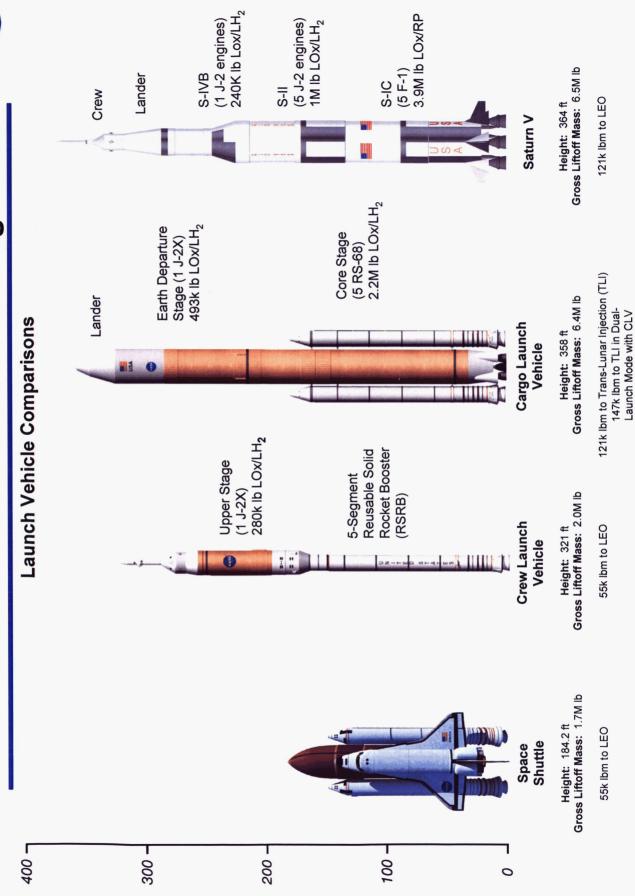

# Next Step in Fulfilling Our Destiny As Explorers

### Foundation of Proven Technologies **Building on a**

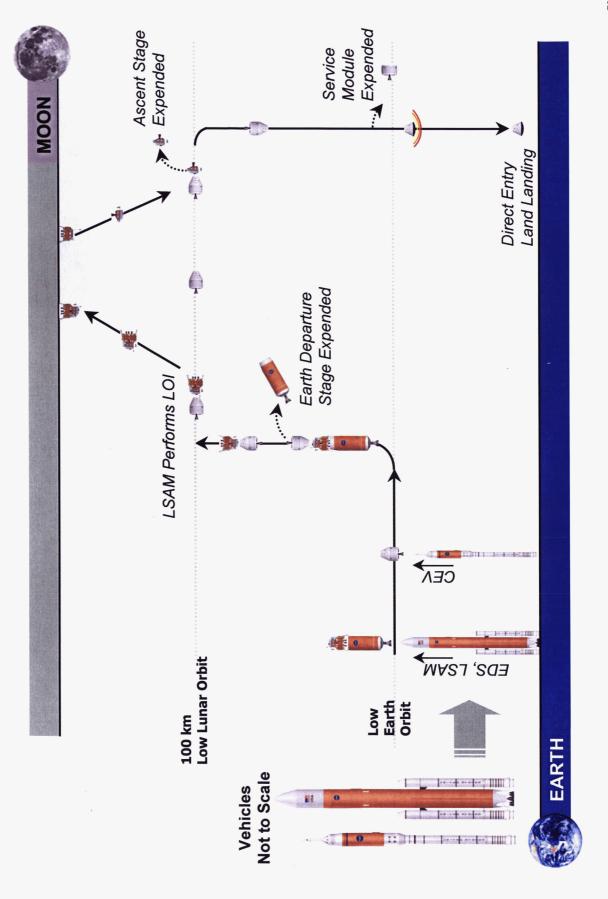

Overall Vehicle Height, ft

# "1.5 Launch" Earth Orbit / Lunar Orbit Rendezvous

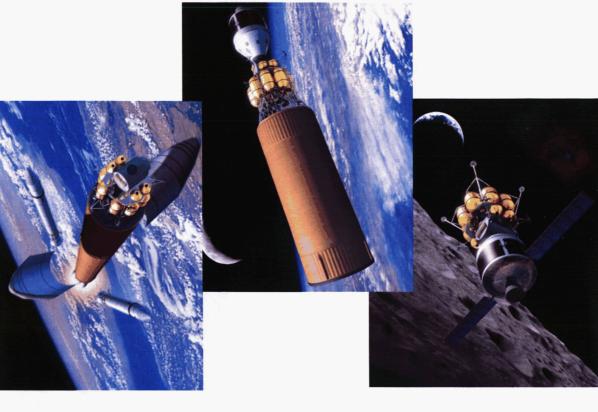

### 73-7

# **Design Philosophy for Mission Success**

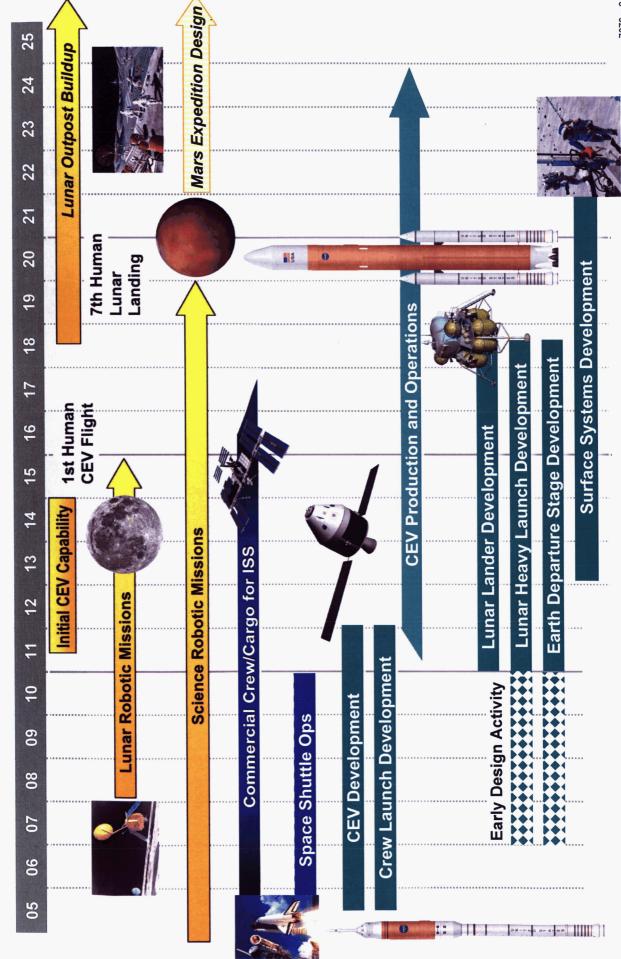

### Keep it simple.

- Minimize complexity and interactions.
- · Simplify interfaces.
- Make it robust.
- Focus on reliability, maintainability and supportability early to improve safety and reduce operations costs.
- ▶ Apply validated engineering tools, models, and data to new vehicle configurations.
- Apply Lessons Learned

## NASA's Exploration Roadmap

## Upper Stage Overview

### CEV

198 in. (5 m) diameter

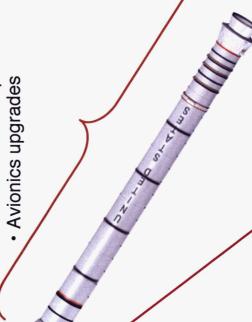

~25-mT payload capacity

Stack Integration by CLV Vehicle Integration Ofc.

- 2-Mlb gross liftoff weight
  - 320 ft in length

### First Stage

- Derived from current Shuttle Reusable Solid Rocket Motor/Booster (RSRM/B)
  - Five segments/Polybutadiene Acrylonitride (PBAN) propellant
    - Recoverable
- New forward adapter

### Upper Stage

- 280-klb Liquid Oxygen/Liquid Hydrogen
  - (LOX/LH<sub>2)</sub> stage 216.5 in. (5.5 m) diameter
- Aluminum-Lithium (Al-Li) structures
- · Instrument unit and interstage
- RCS / roll control for 1st stage flight
- Primary CLV avionics system

## NASA "Clean-Sheet" Upper Stage Design

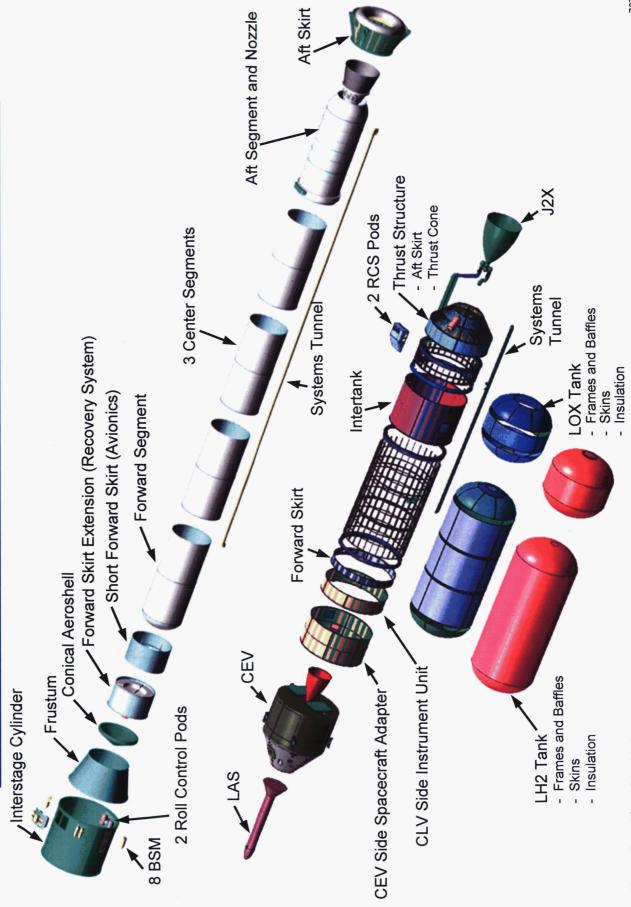

- (Supported by Production Contractors and Ops Team)
- NASA Led Development, Test and Verification
   ◆ Contracted Production and Operation Support

### Upper Stage Engine

- Saturn J-2 derived engine (J-2X)
- Expendable

# CLV Configuration – Expanded View

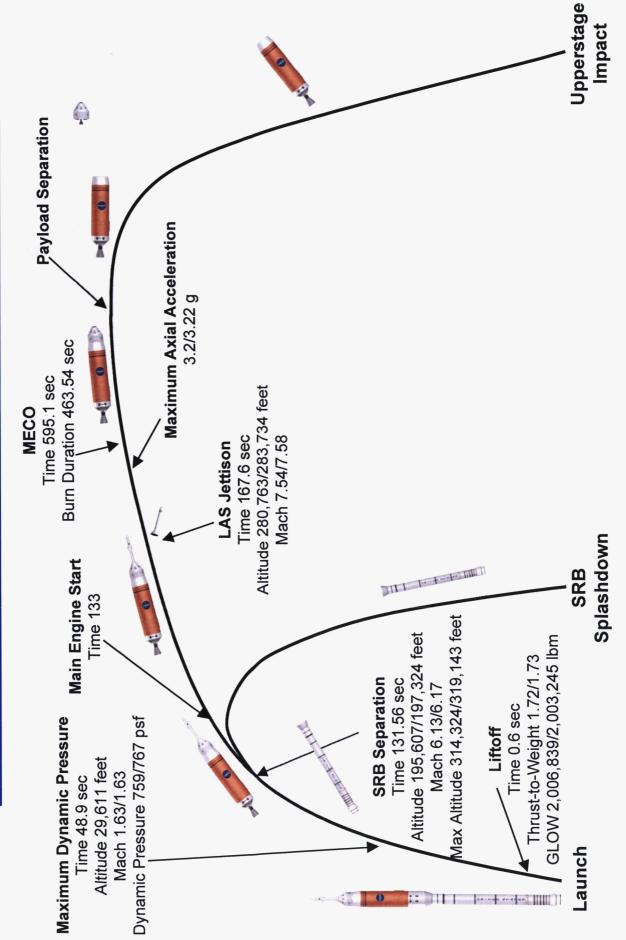

### 7073 - 11

## Reference Missions (28.5°/ 51.6°)

# NASA Design Team (NDT) IPT Structure

### Typical IPT

Subsystem Manager
Product Lead
USP Team Lead
AP Team Lead

SSM - Strategic Responsibility Staffed by Project

PM - Tactical Responsibility Staffed by Engineering Upper Stage Production (USP) Lead - Production and Ops Responsibility

Avionics Production (AP) Lead – Production and Ops Responsibility

### ◆ Approach

S&MA

• Early Participation of NASA Contractors in a collaborative environment

Component Development

lopment

Component Development

Teams

Component

SE&

- No-Nonsense Design
- Limit Requirement Creep / Over Specification
  - Proven Technology

### Soals

- Safe Design First and Foremost
- Reduce Cost

### **Battleship Stage**

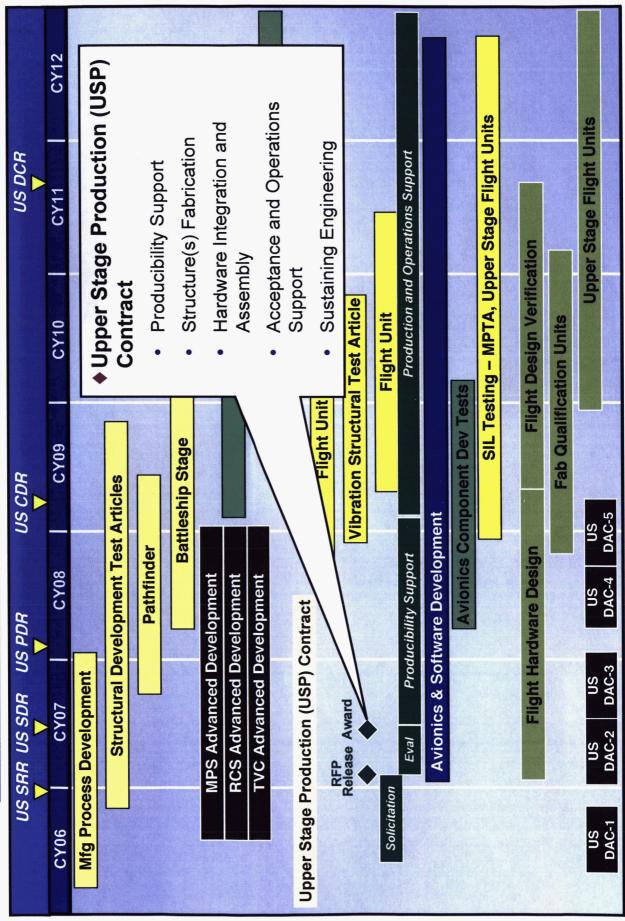

## Upper Stage RFI Summary

# 21 Companies / Teams Responded to the Upper Stage RFI

## Summary of responses:

- Supportive of NASA Design Team Approach
- Supportive of separating USP and AP
- Recommend Early Industry Involvement
  - Integrated Product Team Approach

Early technical reviews with Industry

- Early study contracts
- "Badge-less" workforce in a collaborative environment
  - Incorporate USP Configuration Management Early
    - Single Authoritative Data Repository
- Establish and Baseline the Upper Stage Processes and Standards early with IPT Support
- Develop "Buy To" Packages
- Management/contracting of sub-systems and components
- Multiphase Contract Approach
- Cost type migrating toward fixed price production

### 173 - 20

## Upper Stage - Path Forward

## Finalize Acquisition Strategy

- Complete detailed RFI input review
- Acquisition Strategy Meetings to finalize our approach and obtain approval
- Advanced Development Acquisitions

## Design and Analysis Cycle

- System Requirement Review supports RFP Specification Development
- Trade Studies
- Development Planning
  - Manufacturing Plan

### **Project Planning**

- Integrated Master Schedule
- Management and Assessment Plan

# Industry Day Charts will be posted on NAIS Web site at the RFI location:

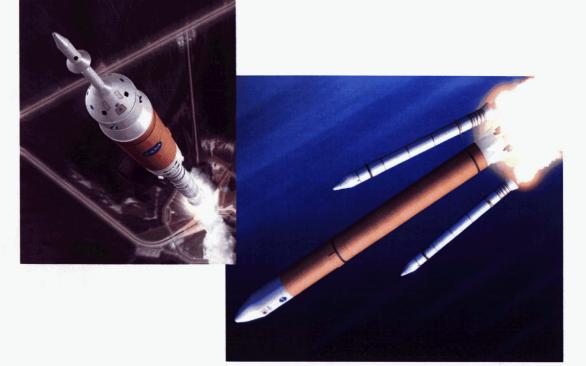

- http://prod.nais.nasa.gov/cgi-bin/eps/bizops.cgi?gr=D&pin=62
  - Updates will be posted as the process continues
- Question regarding the Upper Stage Procurements can be sent to Earl Pendley at 256-544-2949 or email to george.e.pendley@nasa.gov

# The Acquisition approaches discussed are pre-decisional

### Summary

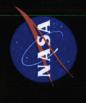

- Build beyond our current capability to ferry astronauts and cargo to low Earth orbit.
- Steps will be evolutionary, incremental, and cumulative.
- To reach for Mars and beyond we must first reach for the Moon.
- Team is on board and making good progress.
- technical, and schedule risks. Utilizing extensive lessons learned to minimize cost,
